

SAFETYRAIL2000
Architectural Series

PATENT PENDING

Use SafetyRail 2000 Architectural Series for new building construction, adding passive fall protection to an existing building or as an addition to existing guardrails.

SafetyRail 2000 Architectural Series combines our non-penetrating guardrail system with an architectural appeal for those applications where appearance of the railing is important. The SafetyRail 2000 Architectural Series has a pleasing sightline and can enhance the overall appearance of your building while maintaining a fall protection barrier around the roof edge that meets OSHA Regulations. Since the Architectural Series utilizes the same patented, non-penetrating base as the SafetyRail 2000, your roof system will maintain its integrity and not be compromised by having to penetrate the roof surface for installation.

A COMPANY OF INNOVATION NOT IMITATION
