

Barry Wired Longline

Typical use and Advantages

For remote hook and longline work requiring:

- a multi-use pre-assembled longline
- a heavy duty, coated cover for additional weight when flying un-loaded
- which reduces the risk of the line being drawn into the tail rotor, as well as enhanced abrasion resistance
- a circular cross-section that reduces drag and can be used at faster speeds
- multiple spare wires for rapid substitution in the field
- a greater flexibility than wire rope, for easy storage and transport
